T-BEYOND THE SMARTPHONE

T-Mobile Confidential

Concept Idea

Predictive Algorithm and Dynamic App Installation Model

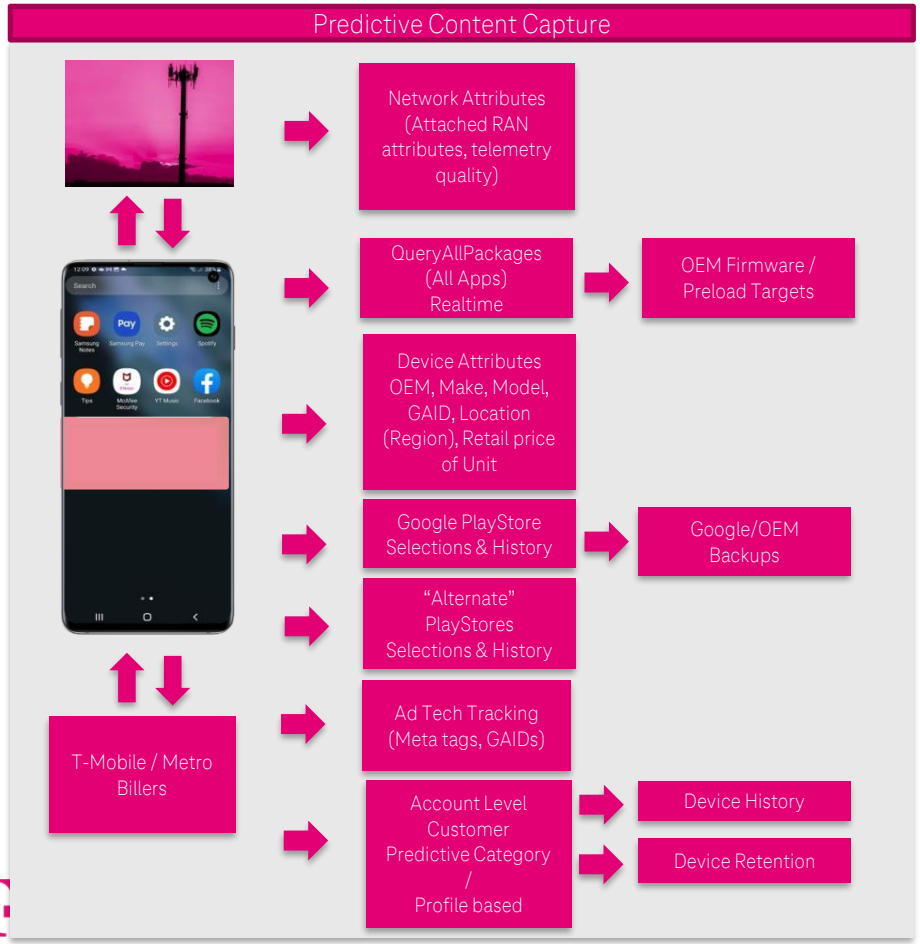
- As a T-Mobile customer with starting with a new device, my device should expertly predict what applications that I should ‘desire’ and want to consume as an Android user.

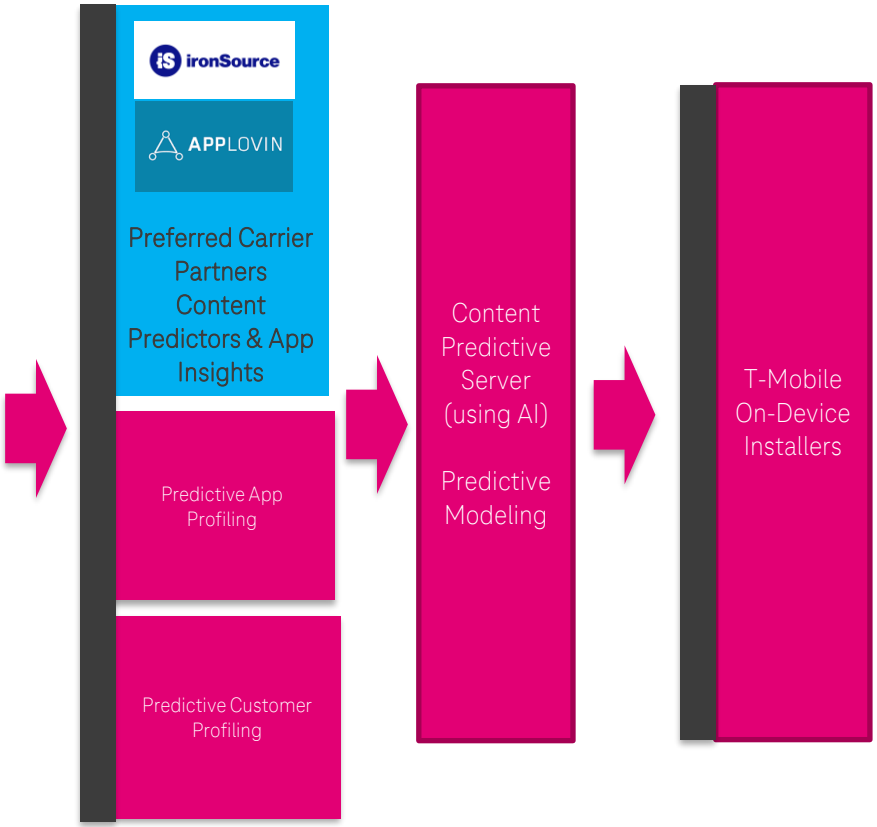
- As a T-Mobile, Metro, Assurance customer with a new device activation, my onboarding and new device experience will be better aligned with my device information, customer knowledge points, marketing insights, device history, and external supplier data points (Google Play Store history, device loaded apps).

Technical Concept

- Prior to our T-Mobile content management dynamic application install process with a new device, T-Mobile will employ a ‘layered cake’ of data point aggregation and apply them to our own predictive algorithm and model for dynamically installing applications.
- This concept shall use a series of algorithms based on knowledge points on-device, off-device, and the user’s entire technology ecosystem to predict what users will delightfully want new applications installed on their handset/tablets.
- Dynamic app installation does not use established norms of preloading through device firmware or a fixed firmware manifest. Rather, it uses real-time intelligence and content aggregation of the customer’s ecosystem and applies the targeted content download with real-time logic during the device setup process.

Predictive Dynamic App Installation





Predictive Source Modeling Systems – T-Mobile

	Logic Content
T-Mobile App T-Mobile EchoLocate	Device analytics data, Lat/Long, customer behavior on apps. Network analytics.
T-Mobile App T-Mobile On-Device Installers (Adapt / Content Manager)	Customer choice / contractual preloads configurations (market demand).
T-Mobile Ad Platform (Blis/AdPixel) T-Mobile T-Ads Advertisement Consent Opt-In Tracking	Direct and 3rd party ad/impression intelligence
Unity AppSelector/AppMgr, AppLovin AppHub T-Mobile / 3rd Party Shared App Selections, Preferences, App Removals	Demand Side Platform capabilities, customer ad analytics, OOBE customer engagement, lifecycle app choices/removals.
T-Mobile Biller / Network Content	Customer Profile, Account Types, Service History, Opt-Ins, etc. Network plans/Network usage

Best app / ad offer based on:

AI analysis of customer scenarios:

- Device
- Customer profile
- Account Types
- Lat/Log/GeoZone
- Customer flow
- Lifecycle status
- 3rd party app choices
- Opt-In / Ad clicks
- Market demand for apps
- Market "love cycle" for apps
- Revenue opportunities

Real-Time Content Predictive Model For Dynamic App Targeting

Awareness: Because we as a carrier exist as a "entity in the middle" of all the ecosystems, we are in a unique position to aggregate our key data points and use our intelligence data to apply our own predictive algorithms for dynamic app installations.

Predictive Dynamic App Installation

ironSource

APPLOVIN

Preferred Carrier Partners Content Predictors & App Insights

Predictive App Profiling

Predictive Customer Profiling

Content Predictive Server (using AI)

Aggregation of sources, perform AI modeling.

Content Predictive Server

Final CPS app choices delivered to installer. App content delivered based on preload final configuration.

Customer app choices are highly focused selections for choice/native app installs which will convert to long-term use.

T-Mobile On-Device Installers (firmware)

Requests from CPS, manifest for preloading.

- No PlayStore required
- Automatically installs customer choice of app.

T-Mobile Performs AI-based dynamic, real-time and customized targeted app selections.

Today:
Preloads are a guessing game or pure revenue opportunity for T-Mobile that are not focused on customer delight. Customers receive an experience of a "fixed" set of apps for all customer types and devices.

Awareness: Because we as a carrier exist as a "entity in the middle" of all the ecosystems, we are in a unique position to aggregate our key data points and use our intelligence data to apply our own predictive algorithms for dynamic app installations.

Inventor Details
